

Boolean-solid process DSL feature tour

One readable run sheet; topology-changing steps select the trimesh/manifold3d backend

1 circular wafer

```
Wafer(size=diameter, shape="circle", notch="V")
```

2 inherited film shape

```
add_layer(...) # circular blanket
```

3 repeated stack

```
add_multilayer(layers, repeats=2)
```

4 boolean etch

```
etch(Rectangle / Circle / Ellipse)
```

5 exact-shape fill

```
fill(rect, Cu) fill(circle, W) fill(ellipse, Si:P) add_pad(...) per line at a constant pitch
```

6 1D grating on top

Circular wafer and films are true cylinders. Rectangle, circle and rotated-ellipse fills reuse their void geometry.
